

Lab 3 - HTML Tables

<table>

Explanation:

Defines a table. A table contains rows and columns.

Important Attributes:

border, width, cellpadding, cellspacing, align (obsolete)

Example:

```
<table border='1'></table>
```

<caption>

Explanation:

Gives a title to the table. It should be the first child inside <table>.

Important Attributes:

Global attributes: id, class, style, title

Example:

```
<caption>Student Details</caption>
```

<tr>

Explanation:

Creates one table row.

Example:

```
<tr>...</tr>
```

<th>

Explanation:

Creates a heading cell. Bold and centered by default.

Important Attributes:

colspan, rowspan

Example:

```
<th>Name</th>
```

<td>

Explanation:

Creates a data cell.

Important Attributes:

colspan, rowspan

Example:

```
<td>Yug</td>
```
